Bounded & Closed
Finite set is compact
Closed subset is compact
3.4. Equivalence of norms on R^n
Cover
open cover
finite subcover
Compact
Finite union is compact
Infinite intersection is compact
Topological property
metric space
open rectangle
[a, b] in R is compact
(X x Y) compact = X, Y compact
A in R^n compact = closed & bounded
Heine–Borel 1-D
Heine–Borel
Lemma 3.6.3
Lemma 3.6.5
Sequentially Compact
depend on open cover
Totally bounded
compact + cts = compact
Corollary 3.2.4
Corollary 3.2.5
Lebesgue Number
cts + bij + compact = homeomorphism
isometry ⟹ Lipschitz equivalence ⟹ uniform equivalence ⟹ homeomorphism
cts + compact domain = u.c.
uniform continuous
uniformly equivalent metrics
uniformly equivalent metric spaces
